

BLG-02-SM

Super-Shallow Mount Bollard

The Simple Way To Provide Occasional Access To Restricted Spaces

Flexible Defence For Your Restricted Spaces

The BLG-02-SM-200 Shallow Mount Bollard is a superb solution for the growing threat of car-ramming and other vehicular attacks. Terrorists have been increasingly using vehicles to target crowded civilian areas and other sensitive or high-profile sites, killing and wounding thousands of people worldwide. Our solution addresses this critical vulnerability quickly and effectively, enabling you to secure dense urban settings and other intricate environments and perimeters.

The BLG-02-SM-200 is an easily installed fixed bollard that requires a super shallow foundation of only 175 mm (6.9"). This makes it ideal for urban areas and other high-density locations with vast underground infrastructure or limitations that hinder more traditional solutions. Our cutting-edge bollard comes with the PAS68:2013 and IWA14-1:2013 impact test certification and has resisted a 7,500 Kg truck traveling at 48 km/h, with zero penetration. This innovative bollard is available in a variety of colours and finishes and seamlessly blends into any environment.

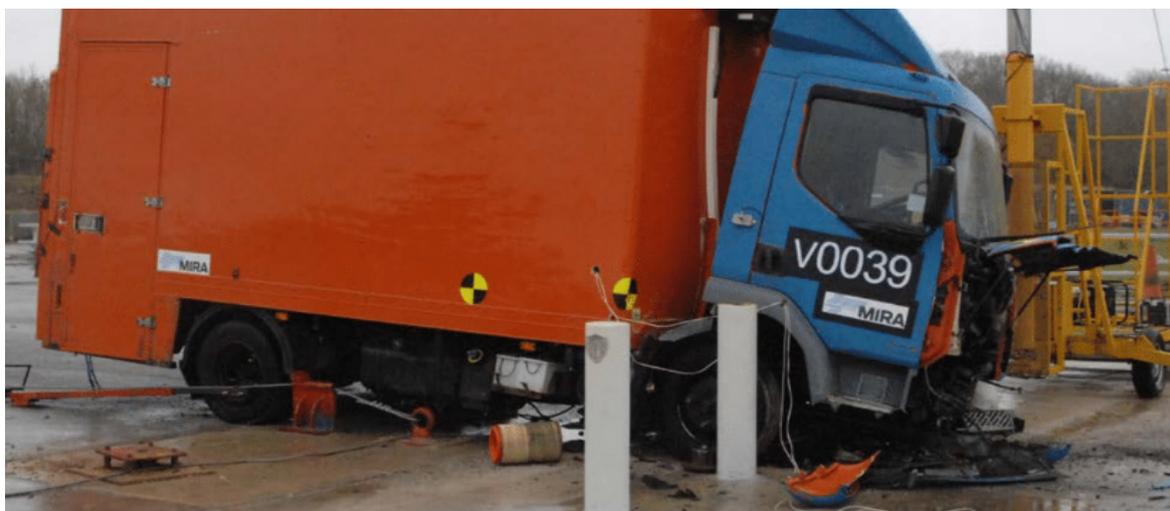

1 Super-easy to install almost anywhere

2 Shallow foundation of just 175mm

3 Certified IWA14 and PAS68
